

Once a regional leader in energy efficiency, Ohio eliminated its energy efficiency resource standard (EERS) in 2019 as part of the scandal-ridden House Bill 6. While the bill eliminated energy savings requirements for electric investor-owned utilities, it did not repeal portions of the law in Ohio that allow cost recovery for voluntary electric EE. The commission has not, however, approved any voluntary plans. Bills that would legislatively restore some electric EE have been proposed but have not yet passed. Small amounts of voluntary gas EE have been approved, though recent cases have drastically reduced funding and the diversity of program offerings.

OHIO EE QUICK FACTS

What's in the cards for Ohio regarding energy efficiency:

<p>Energy Savings Target</p> 	<p>Ohio does not have an energy savings target for electric or gas utilities. The previous savings target for electric IOUs was repealed in 2019.</p>	<p>EE Spend per Capita</p> 	<p>2021 electric EE \$ per residential customer: \$0.93 2021 gas EE \$ per residential customer: \$0.00</p>	<p>Building Energy Codes</p> 	<p>Commercial: 2021 IECC, with amendments Residential: 2018 IECC, with amendments</p>
<p>Stakeholder Collaboration</p> 	<p>Ohio does not have a statewide energy efficiency collaborative. Utilities in Ohio have traditionally engaged utility-specific stakeholder advisory boards to review plans.</p>	<p>Energy Efficiency Financing</p> 	<p>Ohio offers several forms of EE financing, including Commercial Property Assessed Clean Energy (C-PACE) and Energy Loan Funds through the state Department of Development.</p>	<p>Fuel-Switching</p> 	<p>Ohio has not promoted fuel-switching in past EE programs, nor are any IOU electrification programs currently offered. Proposed voluntary EE legislation has not included fuel-switching.</p>

JOBS AND ECONOMICS

Strong EE policies in the past led to utility investment and job growth throughout the Ohio economy. Even today, the Ohio EE industry employs more state residents than any other energy sector. Most employers are small businesses providing local jobs—jobs now at risk because of Ohio's recent policy changes.

74,966 EE jobs, out of **161,891** total energy jobs or **94,780** clean energy jobs

Veterans comprise **8%** of the EE workforce

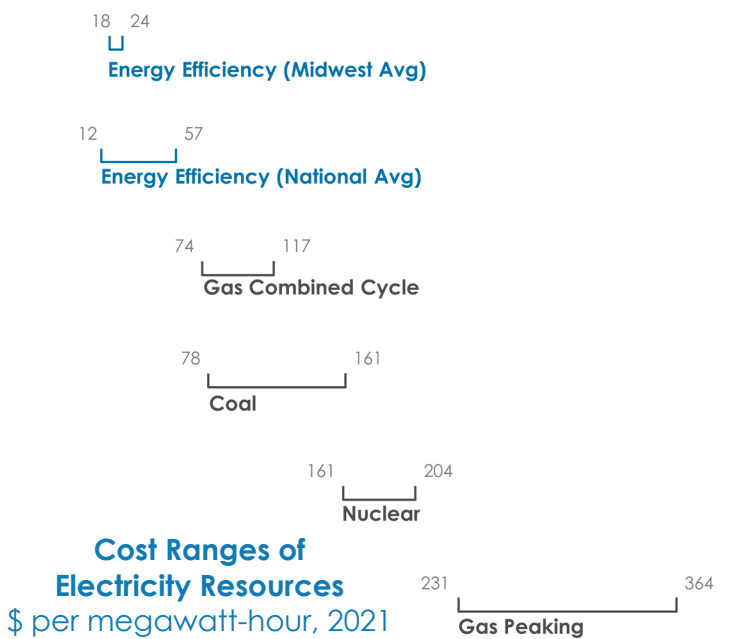

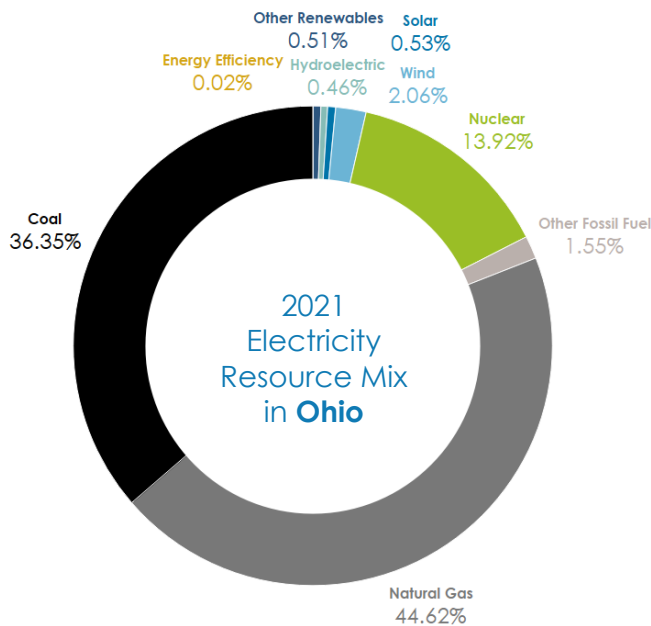

10,560 EE businesses

of those are **small** businesses (fewer than **100** employees)

STATE ENERGY PLANNING

Ohio requires electric utilities to file an annual Electric Utility Forecast Report. This report includes a resource plan with a 10-year long-term forecast of energy needs, which should include a discussion of how demand-side programs could help meet those needs. There is, however, no requirement that demand-side resources actually be included in resource acquisition plans. In 2014, Gov. Kasich's administration issued established nine policy pillars in its Ohio 21st Century Energy Policy Plan. They included energy efficiency and cogeneration, but this document is not nearly as robust as other states' formal state energy plans.

INCLUSIVITY: INCREASING ACCESS TO EE

Whether in affordable housing or rural communities, under-resourced customers need comprehensive program options to reduce their energy burdens. When the state repealed its EERS, low-income energy efficiency programs vanished. If electric EE returns, it is unclear if low-income programming will resume, though disadvantaged customers would benefit immensely from programs, as energy burden is a severe problem for Ohio's poorest citizens. Ultimately, creation of additional targeted EE programs and increased access to programs would improve housing structures in the state and reduce household costs for Ohioans.
